[BOSS NAME HERE]

After looking into the scottyab/rootbeer project there are 27 unique authors contributing to this project. The most vital members are scottyab and stealth copter, both with over 45 commits each. Several authors have very few contributions within the last 2 years and are recommended for removal from the project. The vast majority of members have under 10 commits.

Languages Used

CMake: 0.6 %
C: 1.1 %
C++: 6.9 %
Kotlin: 24 %
Java: 67.4 %

Java Kotlin C++ C CMake

After looking into the project in detail we recommend a focus on Java and Kotlin as the main coding languages used. These 2 languages make up 91.4% of the total files within the project.

The most useful commands for this report were git diff, git log and git branch. These allowed me to get an ab overview of what was going on within the Rootbeer repository.
